

The effective government

Towards better policy, execution and enforcement

Why effectiveness matters

An effective government ensures that policy meets the needs of society, decisions are made quickly and correctly, and enforcement is targeted and efficient. Sadly, this isn't always the case, as slow procedures and error-prone processes have repeatedly shown.

The power of data-driven government

Information-Driven Working (IDW) helps public organisations become more effective by using internal and external data to make better decisions. With a data-driven approach, both policy and execution are optimised, and enforcement becomes sharper and more efficient.

Case Management (ZGW)

Process: Gathering data, checking it against laws and regulations, making decisions, and issuing formal rulings.

Benefits: Faster, more lawful, and explainable decisions.

Information-Driven Enforcement (IGO)

Process: Gathering and analysing data into a reliable situational or environmental picture and using that to deploy people and resources effectively.

Benefits: Risk-based inspections, better transparency, and targeted enforcement.

Transforming for the future

Key steps toward effective case management and enforcement include identifying essential data and designing algorithms that support quick, lawful decisions. Employees are key; by training them as quality and process stewards, we create lasting and controlled change.

Sopra Steria solutions

We support governments in achieving real impact with solutions like:

1. **Semantic Data Management (SDM):** Break down data silos and uncover valuable relationships between data.
2. **CitizensMatter!:** Accelerate case handling and improve citizen satisfaction with an intuitive interface.
3. **Composable Enterprise Architecture (CEA):** Boost the agility and scalability of your IT landscape.
4. **Smart Search:** Quickly find relevant insights in unstructured data.
5. **Responsible AI:** Design and implement fair, explainable, and lawful algorithms.

Real results that matter:

- **Smarter policy:** Based on better data and insights.
- **Faster execution:** Fewer mistakes thanks to process automation and better information availability.
- **Targeted enforcement:** Resources are used where and when they're needed most.
- **Transparent decisions:** Clearer processes, better democratic oversight.

Let's build a future-ready government

Sopra Steria brings together decades of digital expertise and deep knowledge of public organisations. We believe in close collaboration and shared accountability. Our pragmatic, agile way of working delivers measurable results, without disrupting everyday operations.

Take the first step towards better decision-making and delivery
